DETAILED ACTION

Note: This is in response to Amendment filed 04/17/2007.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-10, 21, 29-33, 60-71, and 74-75 are rejected under 35 U.S.C. 102(e) as being anticipated by Nash (U.S. 5,779,721).

Nash discloses in figures 1-3, an elongate flexible tubular body (22,24); a rotatable cutter (32) disposed at the distal end of said tubular body (22,24); an aspiration lumen (at Q2 of fig. 3) extending through said tubular body (22,24); a control or hub (66) disposed on the proximal end of tubular body (22); wherein the cross-sectional area of the aspiration lumen (Q2) is being at least about 35% of the cross-sectional area of the tubular body (24); a sensor (located at 28,74,76) in electrical communication with a an indicator for indicating resistance to rotation of either to rotatable element (42) or rotatable cutter (32) and wherein the motor control circuit (70) is capable of disengaging the motor rotation from the cutter (32) where indicates an overload condition (col. 8, line 20 to col. 9, line 37).

Response to Arguments

Applicant's arguments filed 04/17/2007 have been fully considered but they are not persuasive. As to claims 1 and 60, Nash device discloses an indicator (as stated above) for indicating resistance to rotation of the rotatable cutter having a sensor in which equivalent to the claimed indicator. As to claim 21, Nash device discloses in figures 2 and 3, as clearly shown the cross-sectional area of the aspiration lumen (Q2) that is sized to be at least 35% of the cross-sectional area of the tubular body (24). As to claim 29, Nash's working head (32) is clearly disposed within the tubular body (24), wherein shroud (56) is considered part of tubular body (24). As to claim 65, as best seen in figure 1 of Nash, a control having a connecting hub coupled to the proximal of the tubular body to control the tubular body **may** rotate relative to the control during operation. As to claim 68 should be given its broadest reasonable interpretation, for this reason, the cutter of Nash is clearly capable of being axial displacement relative to the control during operation. As a result, the Examiner disagrees with Applicant's remarks and has maintained the grounds of rejection under 35 U.S.C. 102 (e) as being anticipated by Nash '721 for the reasons as set forth in the previous office action.

Conclusion

1. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
